The Giant Half-Sugar Beets are much more productive than the Sugar Beets and fully equal to the best of them in feeding qualities. A large portion of the root being above ground renders them easy to handle. Every stockman should give them a trial.

Mangel-Wurzel are also very nutritious and yield very heavy crops, often exceeding 1,500 bushels to the acre. It is not unusual to grow roots weighing upwards of 20 lbs. each on fairly rich soil.

Prepare the ground thoroughly, using a liberal supply of barnyard manure, previous to sowing the seed.

It will pay you to change your seed. Price per peck, 50c; bushel, \$1.50; barrel, \$3.85.

British Queen—A remarkably prolific second early potato, possessing a strong and vigorous constitution. Silver King (Wisconsin No. 7) Corn.

CORN.

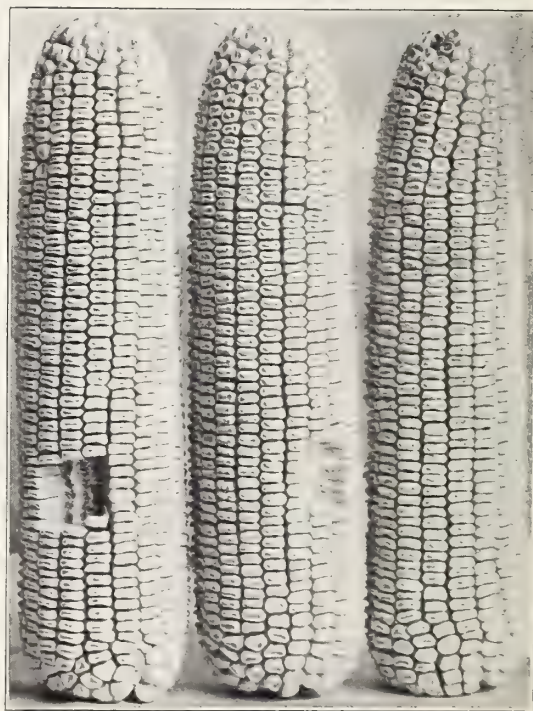

During the past few years the Corn Crop in Wisconsin has developed into a very important one, so that now in point of yield we rank with the best in the Corn Belt. This has been brought about in a great measure through the efforts of the Wisconsin Experiment Station in the selection and breeding of large yielding varieties that are suitable for our climatic conditions.

By special arrangements we have these Wisconsin varieties grown for us by members of the Wisconsin Experiment Association, who give particular care to the selection of the earliest and best ears, so that our stocks are constantly being improved.

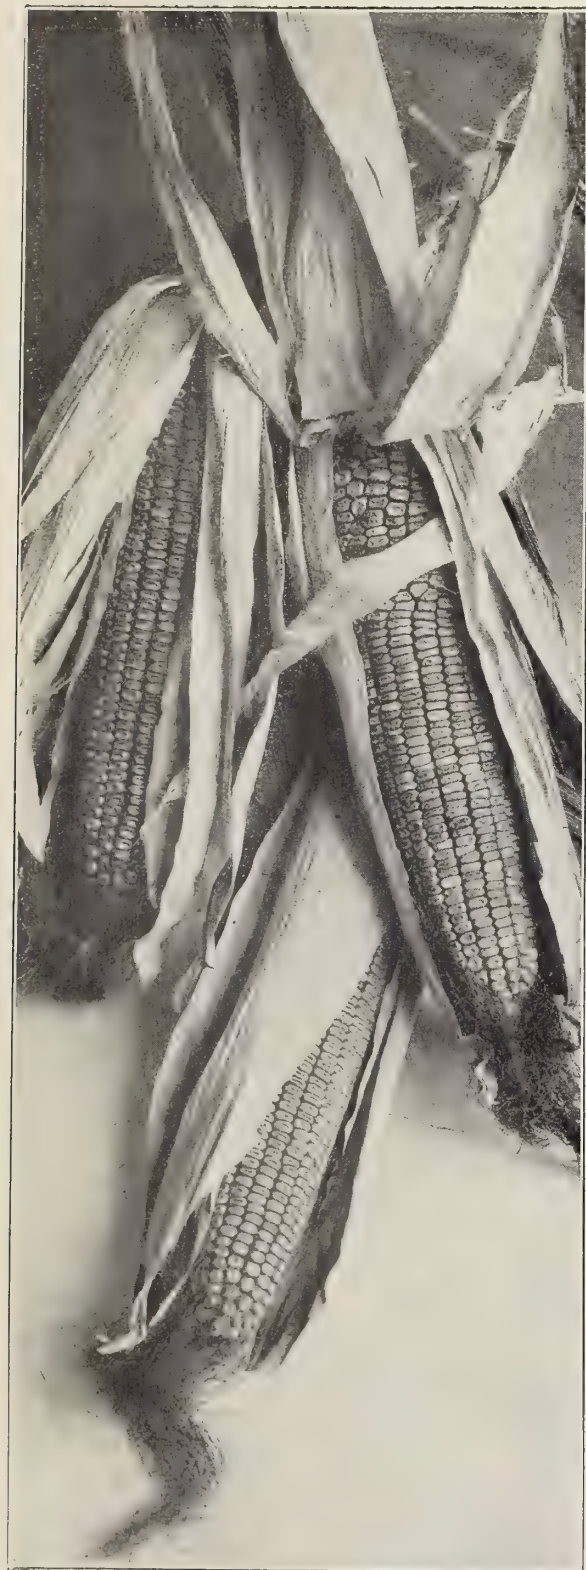

All our Seed Corn is carefully selected and fire dried, after which it is thoroughly tested for vitality and none is allowed to go out that does not show strong germination.

Clark's Yellow Dent (Wisconsin No. 1)—A popular variety bearing good sized ears well filled with bright golden kernels. Shelled, per quart, 20c; peck, \$1.00; bushel, \$3.50. On the ear, peck, \$1.20; bushel, \$3.75.

Silver King (Wisconsin No. 7)—An excellent white dent variety, maturing early, and suited to Wisconsin conditions. It was originally brought from northern Iowa, and developed at the Wisconsin Experiment Station. The ears are large and closely set with deep white kernels. It is a remarkable yielder. In 1908 the average yield of this variety at the Wisconsin Experiment Station was 93 bushels to the acre. Shelled, per quart, 20c; peck, \$1.00; bushel, \$3.50. On the ear, peck, \$1.25; bushel, \$4.00.

King of the Earlies.

CORN.

Wisconsin No. 8 (Early Yellow Dent)—Originally secured by the Wisconsin Experiment Station from Minnesota, where it is known as Minnesota No. 13. It is especially valuable for its earliness, and can be depended to ripen anywhere in Wisconsin. The stalks are fairly large, with a good supply of leaves. The ears average 7 to 8 inches long, and are well filled with fair-sized yellow kernels. Shelled, per quart, 20c; peck, \$1.00; bushel, \$3.50. On the ear, peck, \$1.25; bushel, \$4.00.

Golden Glow (Wisconsin No. 12)—Matures a little later than Wisconsin No. 8. The ears are larger than that variety, and are closely filled with deep golden dent corn. The stalks are fairly large and well furnished with leaves. Shelled, per quart, 20c; peck, \$1.00; bushel, \$3.50. On the ear, peck, \$1.25; bushel, \$4.00.

Earliest of All—A small, exceedingly early variety, maturing in 60 days, small ears that are well filled with white kernels. When planted at the same time as other sorts it is ready for use in July. The stalks grow to an average height of 6 feet, and are well supplied with leaves. It is especially valuable, coming in at a time when fodder is scarce, during the dry summer months. Shelled, per quart, 20c (by mail, 35c per quart); peck, \$1.00; bushel, \$3.00.

King of the Earlies—Dent—Although somewhat neglected lately in the effort to popularize other varieties in Wisconsin, this old favorite still holds its own. In a season that is at all favorable it never fails to mature a heavy crop of first-class corn in the northern part of Wisconsin. The stalks grow to an average height of 8 feet, and they are well covered with leaves close to the ground, and bearing ears of medium length profusely, with a very small cob, closely set with long, deep golden yellow kernels. Shelled, per quart, 15c (by mail, 30c per quart); peck, 60c; bushel, \$2.00; 2½ bushels, \$4.75.

Pride of the North—An old favorite yellow dent variety, maturing a crop of excellent corn in about ninety days. The ears are medium long, cob small, with deep kernels set closely together. Shelled, per quart, 15c (by mail, 30c per quart); peck, 60c; bushel, \$2.00; 2½ bushels, \$4.75.

It is especially suitable for poor, thin soil. Shelled, per quart, 15c (by mail, 30c per quart); peck, 60c; bushel, \$2.00; 2½ bushels, \$4.75.

OATS.

Swedish Select (Wisconsin No. 4)—So generally known as to need no description, except this, that after several years of close investigation we have found them the best all round variety under average conditions. For earliness, yield and general appearance they are hard to beat. The kernels are white and plump, with a thin hull. The straw is strong and vigorous, standing up well, seldom lodging. The seed we offer is Wisconsin grown and thoroughly cleaned, free from impurities.

Peck, 35c; bushel, \$1.00; 5 to 10 bushels at 95c per bushel.

Big Four Oats—A medium early variety, with heavy white grain and strong stiff straw.

Peck, 35c; bushel, \$1.10; 5 to 10 bushels at \$1.00 per bushel.

Silver Mine Oats—A popular hardy variety yielding heavy crops of plump white kernels, free from awns. The straw is stiff, and while the heads are large it does not lodge readily.

Peck, 35c; bushel, \$1.10; 5 to 10 bushels at \$1.00 per bushel.

Regenerated Swedish Select Oats—Imported from the Garton Seed Co., England, with whom they originated. The yield and quality have been greatly improved by their methods, and the seed we offer actually weighs 50 lbs. to the measured bushel.

Peck, 50c; bushel (32 lbs.), \$1.50; 6 bushels and over at \$1.35 per bushel.

Wisconsin Pedigree Oats—A new variety bred at the Wisconsin Experiment Station and sent out this year for the first time. Grown along side Swedish Select, it is earlier, a stronger grower and a far heavier yielder than that sort. It is a valuable acquisition, and cannot fail to be a great boon to the farmers of Wisconsin.

Peck, 50c; bushel, \$1.50.

New Black Oat "Victor"—The earliest and heaviest yielding Black Oat known. No other variety compares with it in point of yield and richness of food.

Peck, 60c; bushel (32 lbs.), \$1.75; 6 bushels and over at \$1.60 per bushel.

Swedish Select Oats.

SPELTZ.

(Emmer.)

Grows and yields better under adverse conditions than any other grain crop. Weight per bushel, 40 lbs. Sow 1½ bushels to the acre.

Peck, 40c; bushel, \$1.25; 5 to 10 bushels at \$1.20 per bushel.

BUCKWHEAT.

Japanese—Very prolific, kernels about double the size of the common sorts, and it ripens earlier.

Peck, 50c; bushel, \$1.50.

Silver Hull—Much esteemed for making flour.

Peck, 50c; bushel, \$1.50.

RYE.

Spring—Used extensively as a catch crop where winter grain has failed. It can be sown later in spring than other grain and be ready to harvest at the same time.

Peck, 50c; bushel, \$1.50; 5 to 10 bushels at \$1.40 per bushel.

Petkus Winter Rye—A remarkably heavy yielder. The Wisconsin Experiment Station reports an average yield of 40.3 bushels of it to the acre. It is greatly esteemed for making bread. Its great productiveness of large, heavy grain and tall, strong straw renders it an exceedingly desirable variety.

Peck, 50c; bushel, \$1.50.

Wisconsin Pedigree Rye—A new fall rye the result of twelve years of careful breeding at the Wisconsin Experiment Station, which for yield and uniformity of kernels eclipses all other sorts. It has a strong, stiff straw, with heads of unusual length. The kernels are very large and plump, almost as large as oats.

Peck, 60c; bushel, \$1.75.

If Grain is wanted in new Seamless Bags, add 20 cts. for each bag required.

BARLEY.

It is generally acknowledged that the State of Wisconsin produces the best Barley in the United States, and that in a measure may be accounted for by there being so many large breweries in the state, looking for the best product at all times. The Wisconsin Experiment Station, has, therefore, given particular attention and has done much in the way of improving a crop so important.

ODERBRUCKER BARLEY.

(WIS. No. 55).

It is a remarkably heavy yielder, with straight, stiff straw and bright, plump grain. After several years of careful investigation it has been estimated by members of the Wisconsin Agricultural Association, who have grown this variety, that it yields from five to ten bushels more per acre than the old six-rowed sorts now in general use.

Oderbrucker Barley has a protein content of nearly double that of the older varieties, rendering it especially valuable for feeding, and as a malting Barley it easily leads other sorts.

In general appearance Oderbrucker Barley is much the same as the old Manshury, maturing about the same time; the main difference being in the greater yield, plumpness of the kernels and stronger straw. It possesses the further merit of being more resistant of rust.

Peck, 40c; bushel, \$1.25; 5 to 10 bushels at \$1.20.

WISCONSIN PEDIGREE BARLEY (WIS. No. 5).

A new six-rowed Barley bred at the Wisconsin Experiment Station, possessing more good qualities than any other. Growers of it during the past season speak in the most enthusiastic terms of its superiority over all other sorts in yield, plumpness and uniformity of grain, length of head, stiffness and length of straw, vigor of growth and brightness of color.

This Barley was awarded First Prize at the Brewers' Exposition held in Chicago, October, 1911, for its superior malting qualities.

It will pay every grower of Barley well to discard his old stock and sow his entire acreage with this new variety.

Peck, 50c; bushel, \$1.50; 5 to 10 bushels at \$1.40.

CHAMPION BEARDLESS BARLEY.

For feeding it has advantage of being easier to handle and safer for stock than the bearded sorts. In productiveness and feeding qualities it is quite equal to the bearded kinds, and while it is not generally considered as good for malting purposes, it is used by maltsters readily and preferred by some. It, however, is most esteemed as a stock feeding variety.

Peck, 50c; bushel, \$1.50; 5 to 10 bushels at \$1.40.

WHITE HULLESS BARLEY.

FREE FROM HULLS AND BEARDS.

An extra early and very heavy yielding variety, and entirely distinct from others, being more like wheat, the grain being as heavy as wheat, with thin hulls, which are readily separated when threshing. Its extreme earliness makes it valuable for the northern states. As a cropper it is not unusual for it to produce over 60 bushels to the acre. It has no beards or hulls, making it exceedingly valuable for feeding all kinds of stock. For fattening hogs it has no superior, and for horses, compared with Oats only half the quantity is required. Our seed of it is Montana grown. Sow 1½ bushels to the acre.

Peck, 50c; bushel (48 lbs.), \$1.50; 5 to 10 bushels at \$1.40.

WHEAT.

Blue Ribbon Wheat—A new bearded spring variety which has won a number of prizes, including the Milwaukee Chamber of Commerce Silver Trophy in 1910. It originated with Mr. H. E. Krueger, Dodge County, Wisconsin. It is a large yielder and very early, with plump kernels. The straw is short and stiff. It never has shown any sign of rust, blight or smut.
Peck, 60c; bushel, \$2.25.

Minnesota No. 169 Spring Wheat—It is a remarkably heavy yielder, and this, together with its excellent milling and baking qualities, makes it an exceedingly popular variety, so much so that it is now probably grown more extensively than any other sort in Minnesota.
Peck, 50c; bushel, \$1.75; 5 to 10 bushels at \$1.65 per bushel.

Scotch Fife Spring Wheat—An early and very productive hard variety, possessing splendid milling qualities.
Peck, 50c; bushel, \$1.75; 5 to 10 bushels at \$1.65 per bushel.

Blue Stem (Velvet Stem) Wheat—A large yielder and a very popular spring sort in the middle states.
Peck, 50c; bushel, \$1.75; 5 to 10 bushels at \$1.65 per bushel.

Durum or Macaroni (Kubanka) Wheat—An exceedingly valuable spring wheat for dry and semi-arid sections, withstanding drought far better than other sorts. Enormous yields are grown of it in the western states, sometimes reaching 80 bushels to the acre.
Peck, 50c; bushel, \$1.75; 5 to 10 bushels at \$1.65.

World's Champion Winter Wheat—This wheat originated in Wisconsin a few years ago and won the World's Championship at the International Exposition at Omaha in 1909. It is a red bearded sort, possessing more good qualities than any other winter wheat we know of.
Peck, 90c; bushel, \$3.00.

RAPE.

Dwarf Essex Rape—No crop is easier grown and none more profitable for hog and sheep feed. Five pounds of seed are enough for an acre broadcast, and it is ready for feeding six weeks after sowing. One acre will pasture thirty-six sheep two months. It is an annual, similar in appearance to the leaves of Rutabagas, but taller. There is no danger of its ever becoming a pest, as it will not live over winter or produce seed in this country.

Many growers are in the habit of sowing it with grain, using about 2 lbs. of seed to the acre, and it is ready to use a few weeks after harvest. Others sow it in corn at the last cultivation. The best way, however, is to sow it alone either early in spring or as a catch crop after grain is harvested or after an early potato crop. A good plan is to sow it in drills about thirty inches apart and cultivate. By this method it is only necessary to use from 1½ to 2 lbs. of seed to the acre.

Per lb., 15c (by mail, 25c per pound); 10 lbs, \$1.00; 25 lbs., \$2.00; 100 lbs., \$7.00.

If seed is wanted in new Seamless Bags, add 20 cts. for each bag required.

Dwarf Essex Rape.

MILLET.

German Millet—The quality of the true Southern German Grown Millet is far superior to the northern grown variety generally sold, and it yields more than double the quantity of fodder. On fairly rich ground it grows from 4 to 5 feet high, yielding from 4 to 5 tons to the acre. Sow from $\frac{3}{4}$ to 1 bushel to the acre (50 lbs. to the bushel).

Per lb., 5c (by mail, 15c per lb.); 10 lbs., 40c; 100 lbs., \$3.50.

Common Millet—Matures earlier than Southern German Millet, but does not produce as much fodder, neither is it as good. It usually grows 3 to 4 feet high. Sow $\frac{3}{4}$ to 1 bushel to the acre (50 lbs. to the bushel).

Per lb., 5c (by mail, 15c per lb.); 10 lbs., 40c; 100 lbs., \$3.00.

Hog or Broom Corn Millet—Grown mostly for seed which is produced freely and valuable for feeding poultry.

10 lbs., 40c; 100 lbs., \$3.50.

Siberian Millet—Very hardy, earlier than German Millet and withstanding drought much better. It possesses remarkable stooling qualities and makes excellent hay.

10 lbs., 40c; 100 lbs., \$3.50.

Japanese Millet—Is entirely distinct from other Millets. It is a remarkable yielder, growing from 6 to 9 feet high, producing enormous crops of excellent fodder, much relished by all kinds of stock. When cured it makes splendid hay. It grows best on moist ground. If sown broadcast sow 15 to 20 lbs. of seed to the acre, or in drills 12 to 18 inches apart, using 10 to 12 lbs. per acre (36 lbs. per bushel).

Per lb., 10c (by mail, 20c per lb.); 10 lbs., 60c; 100 lbs., \$4.00.

Hungarian—Matures early, and while it does not grow as coarse as some others, it yields a large quantity of excellent hay. It withstands drought well (48 lbs. per bushel).

Per lb., 5c (by mail, 15c per lb.); 10 lbs., 40c; 100 lbs., \$3.00.

Early Fortune Millet—Although grown principally for seed, which is fully twice the size of German Millet and makes splendid poultry feed, it yields a large bulk of fodder very early.

10 lbs., 40c; 100 lbs., \$3.50.

The prices of Millet Seed are subject to market fluctuations.

Making Millet Hay.

SORGHUM.

Early Amber Cane—The earliest and best for the northern states, and the only kind that can be depended upon for syrup or sugar in this latitude. It is also better for fodder than any other, being sweeter and contains more nutriment than southern varieties. The seed should not be sown until the ground is warm, so as to insure good germination. If sown broadcast for fodder, from 50 to 60 lbs. of seed should be used to the acre. Half the quantity is sufficient when wanted for syrup. When sown in single, continuous rows so as to cultivate one way, 12 to 15 lbs. is enough.

Per lb., 10c (by mail, 20c per lb.); 10 lbs., 50c; 100 lbs., \$4.00

If seed is wanted in new Seamless Bags, add 20c for each bag required.

Kaffir Corn—Grown for both grain and forage. It makes excellent forage either dry or green, much relished by all kinds of stock. It is generally sown in drills from two and a half to three feet apart, using about 12 lbs. of seed to the acre. Sow when the ground is warm, on soil that has been thoroughly pulverized. It grows from 4 to 6 feet high.

Per lb., 10c (by mail, 20c per lb.); 10 lbs., 40c; 100 lbs., \$3.00.

Improved Evergreen Broom Corn—Cultivate the same as corn, planting the seed either in drills or hills in rows three to four feet apart. When sown in drills about 18 lbs. of seed are required for an acre.

Per lb., 10c (by mail, 20c per lb.); 10 lbs., 50c; 100 lbs., \$3.50.

FLAX.

If wanted for seed sow from 2 to 3 pecks to the acre, but if grown for fibre, from $1\frac{1}{2}$ to 2 bushels should be used.

Primost (Minnesota No. 25)—A new variety sent out by the Minnesota Experiment Station, yielding about 20 per cent. more seed than the common variety. Per lb., 10c (by mail, 20c per lb.); peck, 85c; bushel (56 lbs.), \$2.50.

Russian Flax—The standard sort. Per lb., 10c (by mail, 20c per lb.); peck, 75c; bushel (56 lbs.), \$2.25.

Prices subject to market fluctuations.

Sand or Hairy Vetch.

COW PEAS.

Extensively used as a fodder crop in the South. Sow after the ground is warm, either broadcast or in drills, covering the seed from 2 to 3 inches. One to two bushels are required to plant an acre broadcast, and about half the quantity in drills.

New Era—An extra early variety.

Michigan Favorite—A favorite in many sections.

Price of either sort, per quart, 20c (by mail, 35c per quart); peck, \$1.00; bushel, \$3.50.

LUPINES.

An excellent forage, also valuable as a soil enricher and renovator.

Yellow Seeded—Sow 90 lbs. to the acre. Per lb., 10c (by mail, 20c per lb.); 10 lbs., 85c; 100 lbs., \$7.50.

FIELD PEAS.

The Canadian Field Peas are very profitable when grown for fodder, besides being a valuable soil enricher. Sown with oats, using 1½ bushels peas and 1½ bushels oats mixed to the acre makes a splendid soiling crop, relished by all kinds of stock. If sown alone use 3 bushels peas broadcast to the acre.

Canadian White—Qt., 15c (by mail, 30c per qt.); pk., 75c; bu., \$2.75.

Canadian Green—Qt., 20c (by mail, 35c per qt.); pk., \$1.25; bu., \$4.00.

Scotch Green—Qt., 20c (by mail, 35c per qt.); pk., \$1.25; bu., \$4.00.

SUNFLOWER.

Mammoth Russian—Produces a large quantity of seed which possesses rich feeding qualities for poultry and hogs, also used largely for parrots. Sow in rows to admit of cultivation. Large pkt., 5c; lb., 25c postpaid. By express, lb., 15c; 5 lbs., 50c; 10 lbs., 90c; 100 lbs., \$6.00.

SAND OR HAIRY VETCH.

An exceedingly valuable crop, yielding enormously on almost any ground. It is biennial, similar in growth to field peas, only that the vines are much finer, longer and more thickly covered with leaves and side stems. It is not unusual to find vines 10 feet long. As a soiling crop it is unequalled, and for spring and fall pasture its value cannot be over-estimated. Seed sown in August will produce splendid fall pasturage by the middle of September, after which a good covering may be left on the ground to prevent washing of the soil during the winter and early spring months. It starts into growth again very early in spring, making a very rapid growth, and will be ready to pasture again by the middle of May, or if allowed to mature will yield a heavy hay crop in June. If sown in April or May it may be cut for hay in July.

It yields enormous crops on rich soil; from 15 to 20 tons of green fodder to the acre not being uncommon, and on sandy, thin ground it makes a remarkably heavy growth. For planting in young orchards and plowing under it possesses great value.

Sow broadcast, either in spring or fall, using from 30 to 60 lbs. of seed to the acre, sowing with it about ½ bushel of oats to support the vines.

Per lb., 20c (by mail, 30c per lb.); 10 lbs., \$1.50; 25 lbs., \$3.50; 100 lbs., \$12.50.

SOY BEANS.

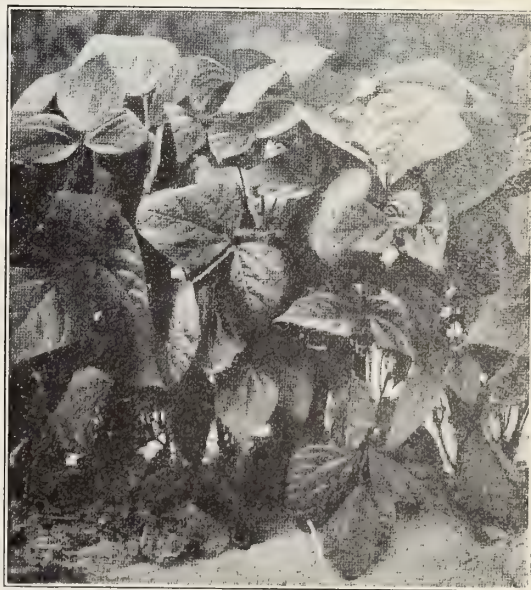

A valuable forage crop, and an excellent soil renovator. We offer only Northern grown varieties, as the larger Southern grown sorts do not mature in this section. The seed should not be sown until the ground is warm; just after corn planting time. Plant in drills 30 inches apart and three or four inches apart in the rows, using 8 to 12 quarts to the acre for forage, or if for seed use about 2 quarts more.

Early Black—Of medium height, plants stocky and prolific.

Ito San (Early Yellow)—A dwarf early variety, producing a large quantity of seed.

Guelph (Medium Early Green)—A general favorite, yielding a good crop of forage.

Price of any of the above Soy Beans, per quart, 20c (by mail, 35c per quart); peck, \$1.00; bushel (60 lbs.), \$3.75.

Cow Peas.

SOIL INOCULATION.

Inoculate the Soil with Nitragin for Clovers, Alfalfa, Beans, Peas, Vetch, etc.

Avoid the old method of using soil from places you know nothing of for the purpose of inoculating it. Besides being expensive, it is dangerous, being productive of many evils, such as introducing weed seeds, etc.

Nitragin is put up in cans in powder form ready for use. Package for 1 acre, \$2.00; for 5 acres, \$10.00, by express. Write for descriptive literature.

Clover Seed is shipped in seamless bags. When ordering, add 20c for each bag required.

ALFALFA. LUCERNE.

Prices subject to market changes without notice.

The great value of Alfalfa to the stockman cannot be over-estimated. No other forage crop combines so many excellent feeding qualities. The fact that three or four heavy crops of it can be cut every season should alone be an incentive to every farmer to put down at least a few acres of it. Alfalfa can be grown successfully in every state in the Union; the soil, however, should be deep and well drained. It will not succeed on heavy, sticky clay ground, or where water stands a short distance below the surface. Before sowing the seed see that the ground is well prepared by being thoroughly pulverized. Any extra work put on the ground at this time will be well repaid in the crop. If sown in spring, wait until the ground is warm, sowing from 20 to 30 lbs. of seed to the acre.

The crop should be cut for hay just as it is coming into bloom. A safe guide is to watch for the starting of the new basil shoots, which form the growth for the next crop, before cutting. If the weather is fine the morning's cuttings should be raked into windrows the same afternoon, and cocked the following day.

We recommend using Northern grown seed. The U. S. Department of Agriculture in its investigations finds that the farther north the seed is grown the hardier it is likely to be, and to meet these requirements we have secured a stock of strictly pure, recleaned Montana grown seed, grown on dry land.

Extra choice recleaned seed, per lb., 30c (by mail, 40c per lb.). By freight or express at buyer's expense, per peck, \$3.25; bushel, \$12.00; 100 lbs., \$20.00.

Alfalfa.

TURKESTAN ALFALFA.

Exceedingly valuable for dry, arid sections. The climate of Turkestan is very similar to our interior western states, the summers being long and very hot. Here cattle raising is carried on extensively and Alfalfa is the main crop. It is from this section we secure our stock of seed. Not only does this variety withstand the dry weather better than any other, but it has the further merit of being able to come through the severest winters without harm. At the Experiment Station, Brookings, S. D., common Alfalfa winter killed on bare ground at a minimum temperature of 40 degrees below zero, while Turkestan came through unharmed.

We offer strictly choice dodder free seed of Turkestan Alfalfa.

Price per lb., 30c (by mail, 40c per lb.). By freight or express at buyer's expense, per peck, \$3.25; bushel, \$12.00; 100 lbs., \$20.00.

SAND LUCERNE.

This variety is especially adapted to thin, sandy soil, yielding heavy crops where other sorts of alfalfa failed. The Michigan Experiment Station reports 5 tons of cured hay of Sand Lucerne to the acre on sandy ground.

It has proved valuable for the sandy fruit lands in Michigan, but is not equal to Alfalfa on medium or rich soils.

Per lb., 35c (by mail, 45c per lb.). By freight or express at buyer's expense, per peck, \$4.25; bushel, \$16.50; 100 lbs., \$27.50.

Alfalfa Seed is shipped in seamless bags. When ordering, add 20c for each bag required.

HAY AND PASTURE GRASS MIXTURES.

FOR SPRING AND FALL SOWING.

These Mixtures are more permanent than Timothy and Clover, and may be depended upon to produce good crops of hay for many years without reseeded.

Two heavy crops of Hay can readily be cut every year from any of the Mixtures, as they recover more rapidly than Timothy.

Only the best reseeded Grass Seeds are used in these Mixtures, and all are put up in the proper proportions to produce the most satisfactory results.

The first cost of seeding with these mixtures is considerably more than Timothy and Clover, but the returns from them fully warrant the extra expense.

The mixtures are prepared for a wide range of soils and conditions, and there is hardly any land so poor or climate so unfavorable that one or more of them is not adapted to.

Prepare the ground by thoroughly pulverizing before sowing the seed so as to get the best results.

LAWN GRASS MIXTURES.

A PERMANENT EVERGREEN LAWN AND HOW TO MAKE IT.

Our many years of practical experience in making lawns is placed at the service of our customers in the mixtures of grass seeds we offer. The first great care in the formation of a lawn is to see that the ground is thoroughly prepared, by being well pulverized, after the soil has been well enriched and worked over. The seed should then be sown, using a liberal quantity so as to insure a thick, even growth. A good lawn may be secured in a few weeks by giving it proper care and the necessary quantity of seed.

We recommend the following quantities when seed of first-class quality is used: 1 lb. to 400 square feet; 20 lbs. to 8,000 square feet; 100 lbs. per acre.

For renovating an old worn-out lawn use about half the quantity of seed, working it into the ground as much as possible without disturbing the present growth of grass.

SPECIAL EVERGREEN LAWN GRASS MIXTURE.

Forms a Rich Green Velvety Lawn in Less than a Month from the Time of Sowing.

Composed of Only Compact Growing Grasses Which Remain Green Throughout the Entire Season.

A splendid mixture of dwarf, compact growing grasses, all of which have been thoroughly tested and free from impurities, and put up in the proper proportions for forming a thick, velvety turf. Only the heaviest and best grass seeds are used, all chaff and light non-productive material being carefully removed. The greatest care is taken in the selection of the seeds for purity, so that only grasses of a uniformly dwarf, compact growth, making an even surface of rich green is produced.

During the early summer months we frequently produce a good compact sod from this mixture ready for cutting in less than a month after sowing the seed.

While the price of this mixture may seem high, it in reality is the cheapest, being composed of the purest and heaviest seed free from light material and chaff.

Price per lb., 30c; 5 lbs., \$1.35; 20 lbs. (1 bushel), \$5.00; 100 lbs., \$22.50. If wanted by mail, add 10c per lb. for postage.

Grass Mixture for Shady Places.

LAWN GRASS MIXTURE FOR SHADY PLACES.

If wanted by mail, add 10c per lb. for postage.

To maintain a nice growth of grass under trees and in places where the sunlight only reaches part of the day was long considered almost hopeless. This can now be overcome in a great measure by using our mixture, which is composed of dwarf, compact growing grasses that naturally grow in partial shade, and will maintain a close, thick turf throughout the entire season. It frequently happens that the ground under trees becomes impoverished by the roots of the trees, making it almost impossible for grass to thrive unless a liberal top dressing of fertilizer is supplied, or when the ground has soured and covered with moss an application of ground lime will be found beneficial before sowing the seed.

Per lb., 35c; 5 lbs., \$1.60; 20 lbs., \$6.00; 100 lbs., \$27.50.

GRASS MIXTURE FOR TERRACES.

This mixture is made up of fine dwarf growing grasses, with strong creeping and fibrous roots that form a compact growth of turf, resisting drought and exposure remarkably well, and when established prevents washing.

Per lb., 35c; 5 lbs., \$1.60; 20 lbs., \$6.00; 100 lbs., \$27.50.

LAKESIDE GRASS MIXTURE.

This mixture is specially prepared for country homes where a close, even, velvety turf is not easily secured, owing to the difficulty of watering, etc., so necessary for the maintenance of a perfect lawn. The grasses used are such as endure drought and rough usage to a remarkable degree.

We have made up this mixture in a great measure for the formation of lawns at Lakeside Summer Homes that can only have attention during the summer months, and for this purpose it will be found invaluable.

Per lb., 20c; 5 lbs., 90c; 20 lbs., \$3.50; 100 lbs., \$17.00.

GOLF COURSE MIXTURE.

Forms a close turf that bears hard usage and remains green throughout the season.

Per lb., 25c; 5 lbs., \$1.00; 20 lbs., \$3.75; 100 lbs., \$17.50.

GOLF MIXTURE FOR PUTTING GREEN.

A mixture of dwarf compact growing, fine leaved grasses that withstand constant wear.

Per lb., 35c; 5 lbs., \$1.60; 20 lbs., \$6.00; 100 lbs., \$27.50.

SPECIAL FERTILIZER FOR LAWNS.

An application of this fertilizer early in spring will produce a vigorous, healthy growth of grass. Use at the rate of 5 lbs. to every 400 square feet of lawn.

Price, 5 lbs., 30c; 10 lbs., 50c; 25 lbs., \$1.25; 50 lbs., \$2.00; 100 lbs., \$3.50.
